

**FERCHAU's DIRECT division is a specialised executive search consultancy. When filling management positions and senior professionals, we successfully bring ambitious and bright minds together with forward-looking companies. We are currently looking for a Senior DevOps Engineer (m/w/d) for one of our well-known clients in the precision mechanics and optics industry.**

## **Senior DevOps Engineer (m/w/d) Direct placement**

 Hybrid  Vollzeit  75.000 - 105.000 €

 München, Deutschland

### **Your area of responsibility**

- In your role as DevOps Engineer, your main task will be the provisioning of the cloud infrastructure
- Automation of software development and support of the team in the complete software development process from development to deployment at our customers - also under aspects of the regulated market
- Evaluation and provisioning of the required (cloud) infrastructure (e.g. with Terraform)
- Creation and maintenance of CI/CD pipelines (Azure Pipelines)
- Design and implementation of a partially automated deployment process on Kubernetes (e.g. with FluxCD, Kustomise)
- Configuration of Kubernetes clusters and provision of the associated telemetries
- Deployment and configuration of various tools in Kubernetes clusters (e.g. message bus, databases)
- Consulting and collaboration on rollout strategies incl. software configuration management
- Consultancy on infrastructure scenarios and an on-premise solution
- Ensuring compliance with security and data protection aspects
- Provision of tools for monitoring, logging and tracing
- Support with the integration of automated tests

### **These are your prospects for the future**

- International environment
- Flat hierarchies
- Hybrid working
- State of the art technologies and much more
- High proportion of remote working

### **What you bring with you**

- Completed training / studies in the field of computer science or comparable training
- At least 5 years of professional experience as DevOps Engineer
- Software configuration in microservice and cloud-native environment
- Knowledge in the area of cloud infrastructure
- Experience with infrastructure as code (e.g. Terraform and Azure)
- Deep knowledge in the creation of CI/CD pipelines (ideally Azure) and establishment of a CI/CD solution
- Knowledge in the operation of Kubernetes clusters on an on-premise landscape
- Able to design and implement infrastructure as a code solutions, suggest a solution including product and customer requirements, document technical solutions
- Understanding of programming languages

**Ready for the next challenge? Then you should definitely get in touch with us!**
